Optimizing Students' Preparation for Class: Just-in-Time Teaching (JiTT)

A. Gavrin, IUPUI

http://webphysics.iupui.edu/nfw_fall18/index.html

A few of your comments

- Vector: Are there resources available, like a repository of already made pre-class assignments…
- Marlowe: …the pace of developing warm-up exercises and reviewing them before each class seems a bit daunting…
- Abraham: **aspects …that weren't really discussed**. For example, how much time is dedicated to traditional problem-solving homework sets…

Outline

- Introduction
- Implementation
- Getting student great evaluations
- Final thoughts

Goals

- Envision ways you can implement JiTT
- Explain the general principles
- Summarize ways that students benefit
- Locate free resources you can use
- Avoid pitfalls
- *Prepare for the "Going Deeper" session*

Going Deeper:

- Completely hands on
- Adapt available JiTT questions to your goals
- Create new questions as needed
- Analyze students' answers efficiently
- Apply JiTT in your own classroom

The (original) settings

- IUPUI: Large, public, urban university
  - 30,000 students, almost 100% live off campus
  - Most work > 25 hours/week
- US Air Force Academy: Military College
  - All students take physics, even history majors
  - All play sports, train for military
- Davidson College: Small liberal arts college
  - Highly selective
  - Small classes

Outline

- Introduction ✓
- Implementation
  - What JiTT is
  - What makes a good warmup exercise
  - Using students' responses
- Getting student great evaluations
- Final thoughts

What is JiTT?

- This guy I know: Similar to a flipped classroom, with pre-class assignments to *ensure adherence to out of classroom preparation*.
- Kalo: A pre-class assignment on material to be covered in lecture, used by the instructor *to tune the lecture to student's needs.*
- Zarquon: Just in time teaching is *a way to get students thinking* about what they know and what they need to learn before they ever walk into class.

What aspect do you think gives the most impact?

a) Encouraging students to complete the preparation
b) Tuning the lecture content to emphasize the topics students found most difficult
c) Getting students to think in addition to simply readingabout what they know and what they do not
d) Other

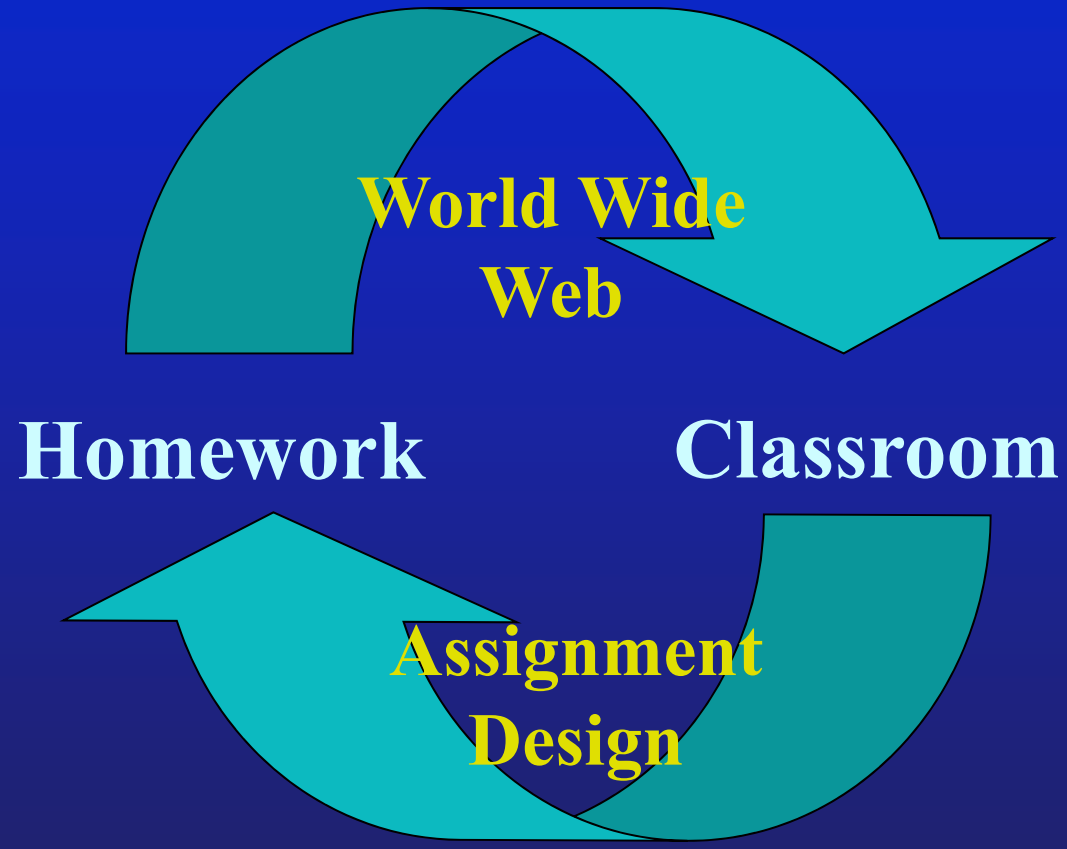
Digression

- JiTT described in your words
- "preview" of important concepts
- Jargon already familiar (JiTT, Warmup)
- Big idea (connect class to HW) already present

Lightning summary

- **Use Warmup exercises to**
  - Motivate and improve preparation
  - Help faculty focus class
- **WarmUp = Online, pre-class reading quiz:**
  - Due few hours before class
  - A few open-ended conceptual questions
  - Cover that day's material
  - Provide "conversation starters"

Just-in-Time Teaching (JiTT)



Example

- *Question: Is it possible to add heat to an ideal gas without changing its temperature? If it is possible, please explain how it is done.*
  - "It is not possible because the internal energy of an ideal gas only depends on the temperature.... the internal energy will increase when the temperature rises…."
  - "If you add heat to a system while the system is doing the corresponding amount of work, the temperature will not change."
  - "It is possible to add heat to an ideal gas without it changing it's temperature by the gas receiving the heat, and the atoms of that gas getting excited enough to disperse that heat as fast as they receive it…"

More Examples

- In a few sentences, explain what an "impulse" is, and how it can be calculated.
- A ford Mustang weighs about 3500 pounds, and can accelerate from 0-60 MPH in about 5 seconds. What force is responsible for this acceleration? What is its approximate magnitude?
- In a sentence or two, please describe the difference between "gauge pressure" and "absolute pressure? When would you want to use each?

Impulse responses

- impulse is the change in momentum over time. it can be calculated by integrating force as a function of time
- …its the force integrated over the time period or the change in momentum in that time period.

- An impulse is a large amount of force that acts on an object of a short amount of time.
- An impulse is the moment at which two objects initially collide and exert enormous force upon each other.

What does the book say?

IMPULSE

When two objects collide, they usually exert very large forces on each other for a very brief time. The force exerted by a baseball bat on a ball, for example, may be several thousand times the weight of the ball, but this enormous force is exerted for only a millisecond or so. Such forces are sometimes called *impulsive forces*….

  - What makes a good warmup exercise
  - Using students' responses
- Getting student great evaluations
- Final thoughts

What makes a good Warmup?

- Bagel: Good warm-up exercises pique the learning interests of students…
- AJK: …should be looking for gaining a **conceptual** idea, not just proof that student did the reading…
- Omar: In my opinion, a good warmup exercise should be simple, intriguing and *short*.
- Apple: …has open ended questions that require **more thought than just plug-and-chug**.
- Anthony: Be thought-provoking and *efficiently* reveal conceptual misconceptions.

Online archive of Warmup exercises

http://webphysics.iupui.edu/warmup/physics_archive.html

- Introductory physics (2 semester sequence)
- Statistical/Thermal Physics (2 sets)
- Intermediate Mechanics (2 sets)
- Modern Physics, Quantum Mechanics
- Intermediate E&M (2 semester sequence)
- Mathematical Methods
- Optics, Intro Astronomy
- Needed: Condensed matter, other specialties…

  - What makes a good warmup exercise ✓
  - Using students' responses
- Getting student great evaluations
- Final thoughts

Choosing and using student responses

- Always say something positive
- Focus on good more than mistakes
- Build a think-pair-share question
  - Now that we've talked about the warmup, let's do that last question again with cards
  - Here's a new clicker question based on the warmup
  - Here are three answers to #2 on the warmup, which is the best?

Choosing and using student responses

"A student gives a warmup response that is seriously incorrect, indicating a deep misunderstanding of the topic. In your opinion, the best thing to do is to…"

a. Point out the mistake in class: 43 %
b. Contact the student by email: 11 %
c. Either, and give zero points: 0 %
d. None of the above: 46 %

Why?

- SD: Point out in class: Often the mistakes of students are similar. Therefore, pointing out the mistake in class may address the problem of other students…
- George: Send email - Since the question is phrased such that it is only one student that responded this way, it doesn't seem fruitful for the rest of the class to hear the explanation
- Bmanocles: None - None of the first three options seem appropriate in every situation. Pointing out the mistake in class is only useful if it is a mistake made by other students as well.

Tips and Pitfalls

- Explain methods and purpose on first day
- Do not "isolate" warmups – use throughout class
- No need to review all responses before class: sample for "useful" quotes, grade later
- Focus on students strengths, not just misconceptions
- Use answers from many students
- Must be routine. Don't start/stop mid-semester
- Fewer, deeper questions in upper level classes.

Results

- Students better prepared for class
  - Familiar with jargon
  - Given thought to ideas
- Faculty better prepared for students
  - Misconceptions identified
  - Just in time adjustment to coverage
- Class time spent more productively
  - Students interact during class

Outline

- Introduction ✓
- Implementation ✓
- Getting student great evaluations
- Final thoughts

How to get great student evaluations

- First five minutes are critical!
- Be a leader—college is hard, and students look to you for motivation, don't disappoint them.
- Earn trust—take time on the first day of class to explain what you are doing and why.
- Build a team—let students know that you and they are working towards a common goal.
- Hold yourself and your students to high standards—if you work hard, they will too.

Summary

- JiTT is based on feedback between homework and classroom
- WarmUp exercise: a pre-class, online reading quiz
- Improved study habits, retention, content knowledge, morale.
- Instructor knowledge of student difficulties
- Easily adopted and adapted

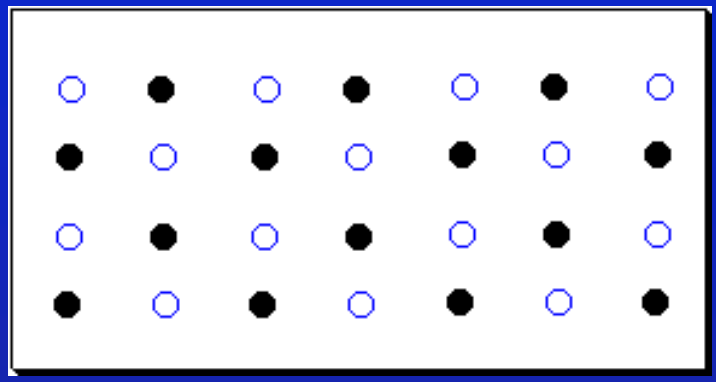
Chemistry example

This picture depicts matter at the submicroscopic level. Describe what you see and take a guess as to what the identity of the substance is.



- "The particles are well spaced out so I would guess the substance to be a gas. The substance is a gas composed of 2 elements that are in an equal ratio."
- "After reading Chapter 1 in the book I would guess that the substance is water in the form of a solid because the atoms are in order. However, I could be wrong because I think the atoms in a solid might be closer together."

Outline

- The Challenges ✓
- Just-in-Time Teaching ✓
  - Background ✓
  - implementation ✓
  - Aside: How to get great student evaluations ✓
- Assessment ✓
- Getting started

Study Habits (N=155, biology)

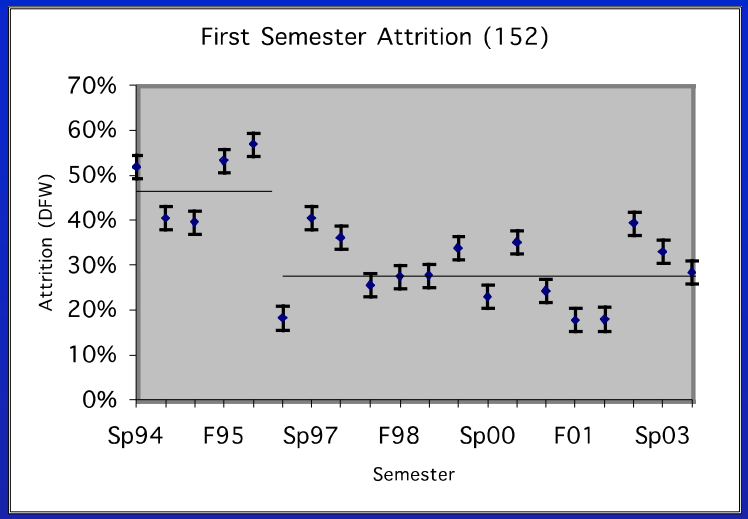
Q1 Do the WarmUps help you stay caught up?

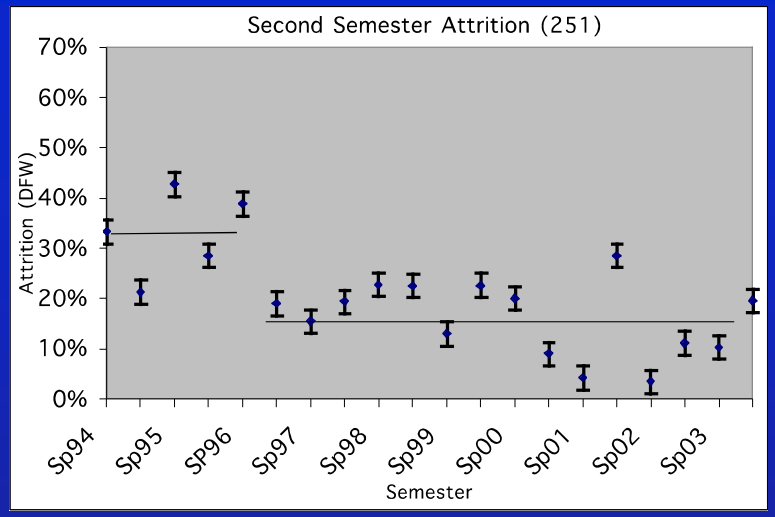
Q2 Do you "Cram" before tests in this course?

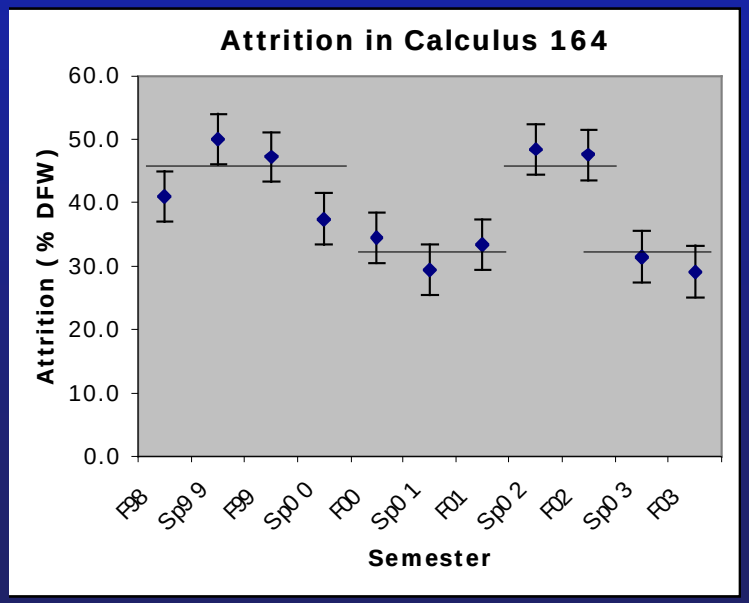
Q3 Do you "Cram" in your other courses?

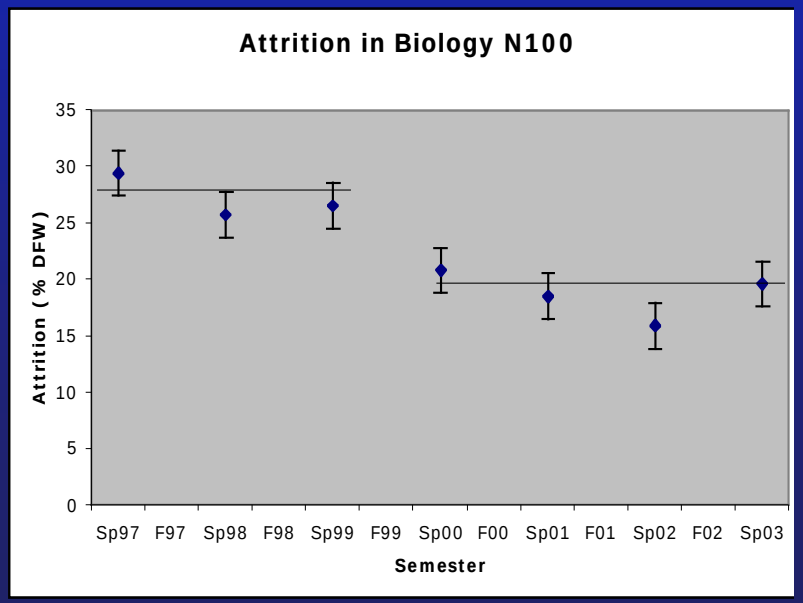
	1- Yes	2- Yes	3- Yes
"A" students	85%	14%	43%
"B" students	89 %	39%	61%
"C" students	89%	47%	68%
"D" students	84%	68%	68%
"F" students	92%	58%	58%

Retention (N~80-150/semester)









Cognitive (biology, N~200)

Final exam questions tied to…	**% Gain (Post%-pre%)**	**Average Normalized Gain**
no interventions	%G = 15% (25%-10%)	<g> = **0.16 7**
additional homework problems	%G = 17% (35%-18%)	<g> =**0.20 7**
WarmUp **or** cooperative learning questions	%G = 45% (59%-14%)	<g> = **0.51 1**
WarmUp **and** cooperative learning questions	%G = 56% (68%-12%)	<g> = **0.63 6**

Affective (E&M, N~60)

1. Do you feel that the warm-up assignments helped your professor make good use of the classroom time?	Yes 47 **87%**	No 7 13%
2. Do other professors have better ways to determine how class time should be used?	Yes 14 26%	No 40 74%
3. Do you feel that the warm-up assignments helped your professor focus on important topics in class?	Yes 49 **91%**	No 7 13%
4. Do your other professors have effective methods for focusing on important topics in class?	Yes 33 61%	No 21 39%
5. Did the warm-up assignments help your professor get a good feel for what the students know?	Yes 42 **81%**	No 10 19%
6. Do your other professors have effective methods for getting a feel for what their students know?	Yes 20 38%	No 33 62%
7. Do you think the warm-up assignments help your professor get students involved during the lecture?	Yes 37 **70%**	No 16 30%
8. Do your other professors have effective methods for getting their students involved in lecture?	Yes 23 43%	No 31 57%

Student Comments

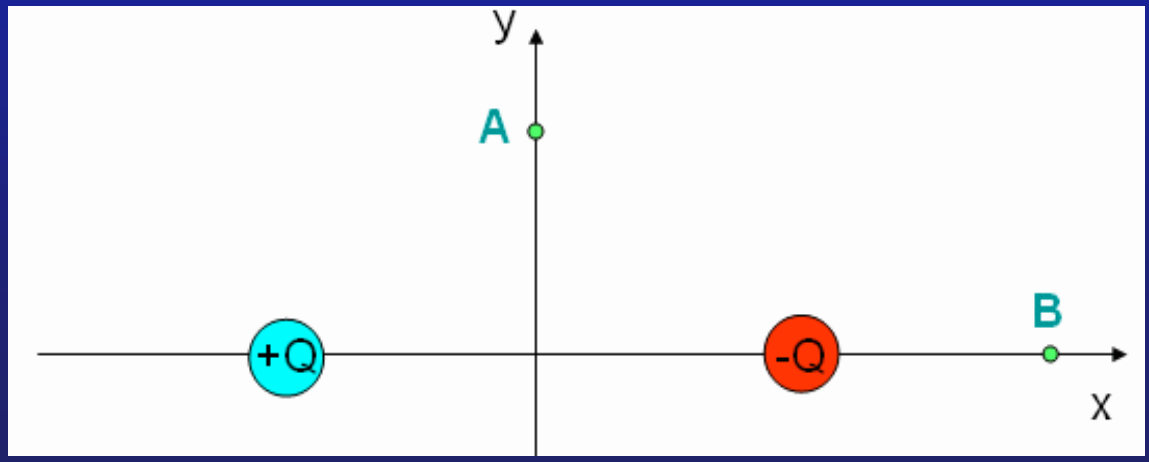
- “This was a fantastic course. It was the hardest course I’ve taken yet, but also the most fun.”
- I think the WarmUps are a good idea because they give students a chance to think about the material prior to lecture.
- "This course was very well structured. It was obvious that a lot of time was spent in preparation for it.”
- "152 & 251 have made me reach more than any courses I have taken.”
- Don’t tell anyone, but I think I will greatly miss my physics class.

smartPhysics checkpoint

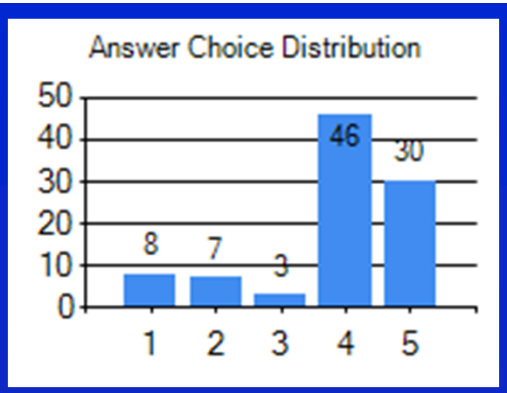
1. Two equal, but opposite charges are placed on the x axis. The positive charge is placed at to the left of the origin and the negative charge is placed to the right, as shown in the figure. What is the direction of the electric field at point A?

a) up b) down c) left d) right e) zero

2. Explain your reasoning



smartPhysics output



Aaron (aaron@iupui.edu)

1) 4

2) the field from Q+ points up and to the right, while Q- points down and to the right therefore when adding them together it points to the right.

Beatrice (beatrice@iupui.edu)

1) 4

2) point A is equidistant from each charge and they would therefore cancel out

Ada (ada@iupui.edu)

1) 2

2) The charges will cancel out so the direction of the force will be down

Ahmed (ahmed@imail.iu.edu)

1) 4

2) the field is toward the negative charge and away from the positive charge which makes the direction to the right
